Lesson 2.4

Estimate Products

Essential Question How can you estimate products by rounding and determine if exact answers are reasonable?

UNLOCK the Problem REAL WORLD

An elephant can reach as high as 23 feet with its trunk. It uses its trunk to pick up objects that weigh up to 3 times as much as a 165-pound person. About how much weight can an African elephant pick up with its trunk?

- Cross out the information you will not use.
- Circle the numbers you will use.
- How will you use the numbers to solve the problem?

One Way Estimate by rounding.

STEP 1 Round the greater factor to the nearest hundred.

$$3 \times 165 \approx 3 \times 200 = 600$$

STEP 2 Use mental math.

Think: $3 \times 200 = 3 \times 2 \text{ hundreds} = 6 \text{ hundreds}$

So, an African elephant can pick up about 600 pounds with its trunk.

Another Way Estimate by finding two numbers the exact answer is between.

$$3 \times 100 = 300$$

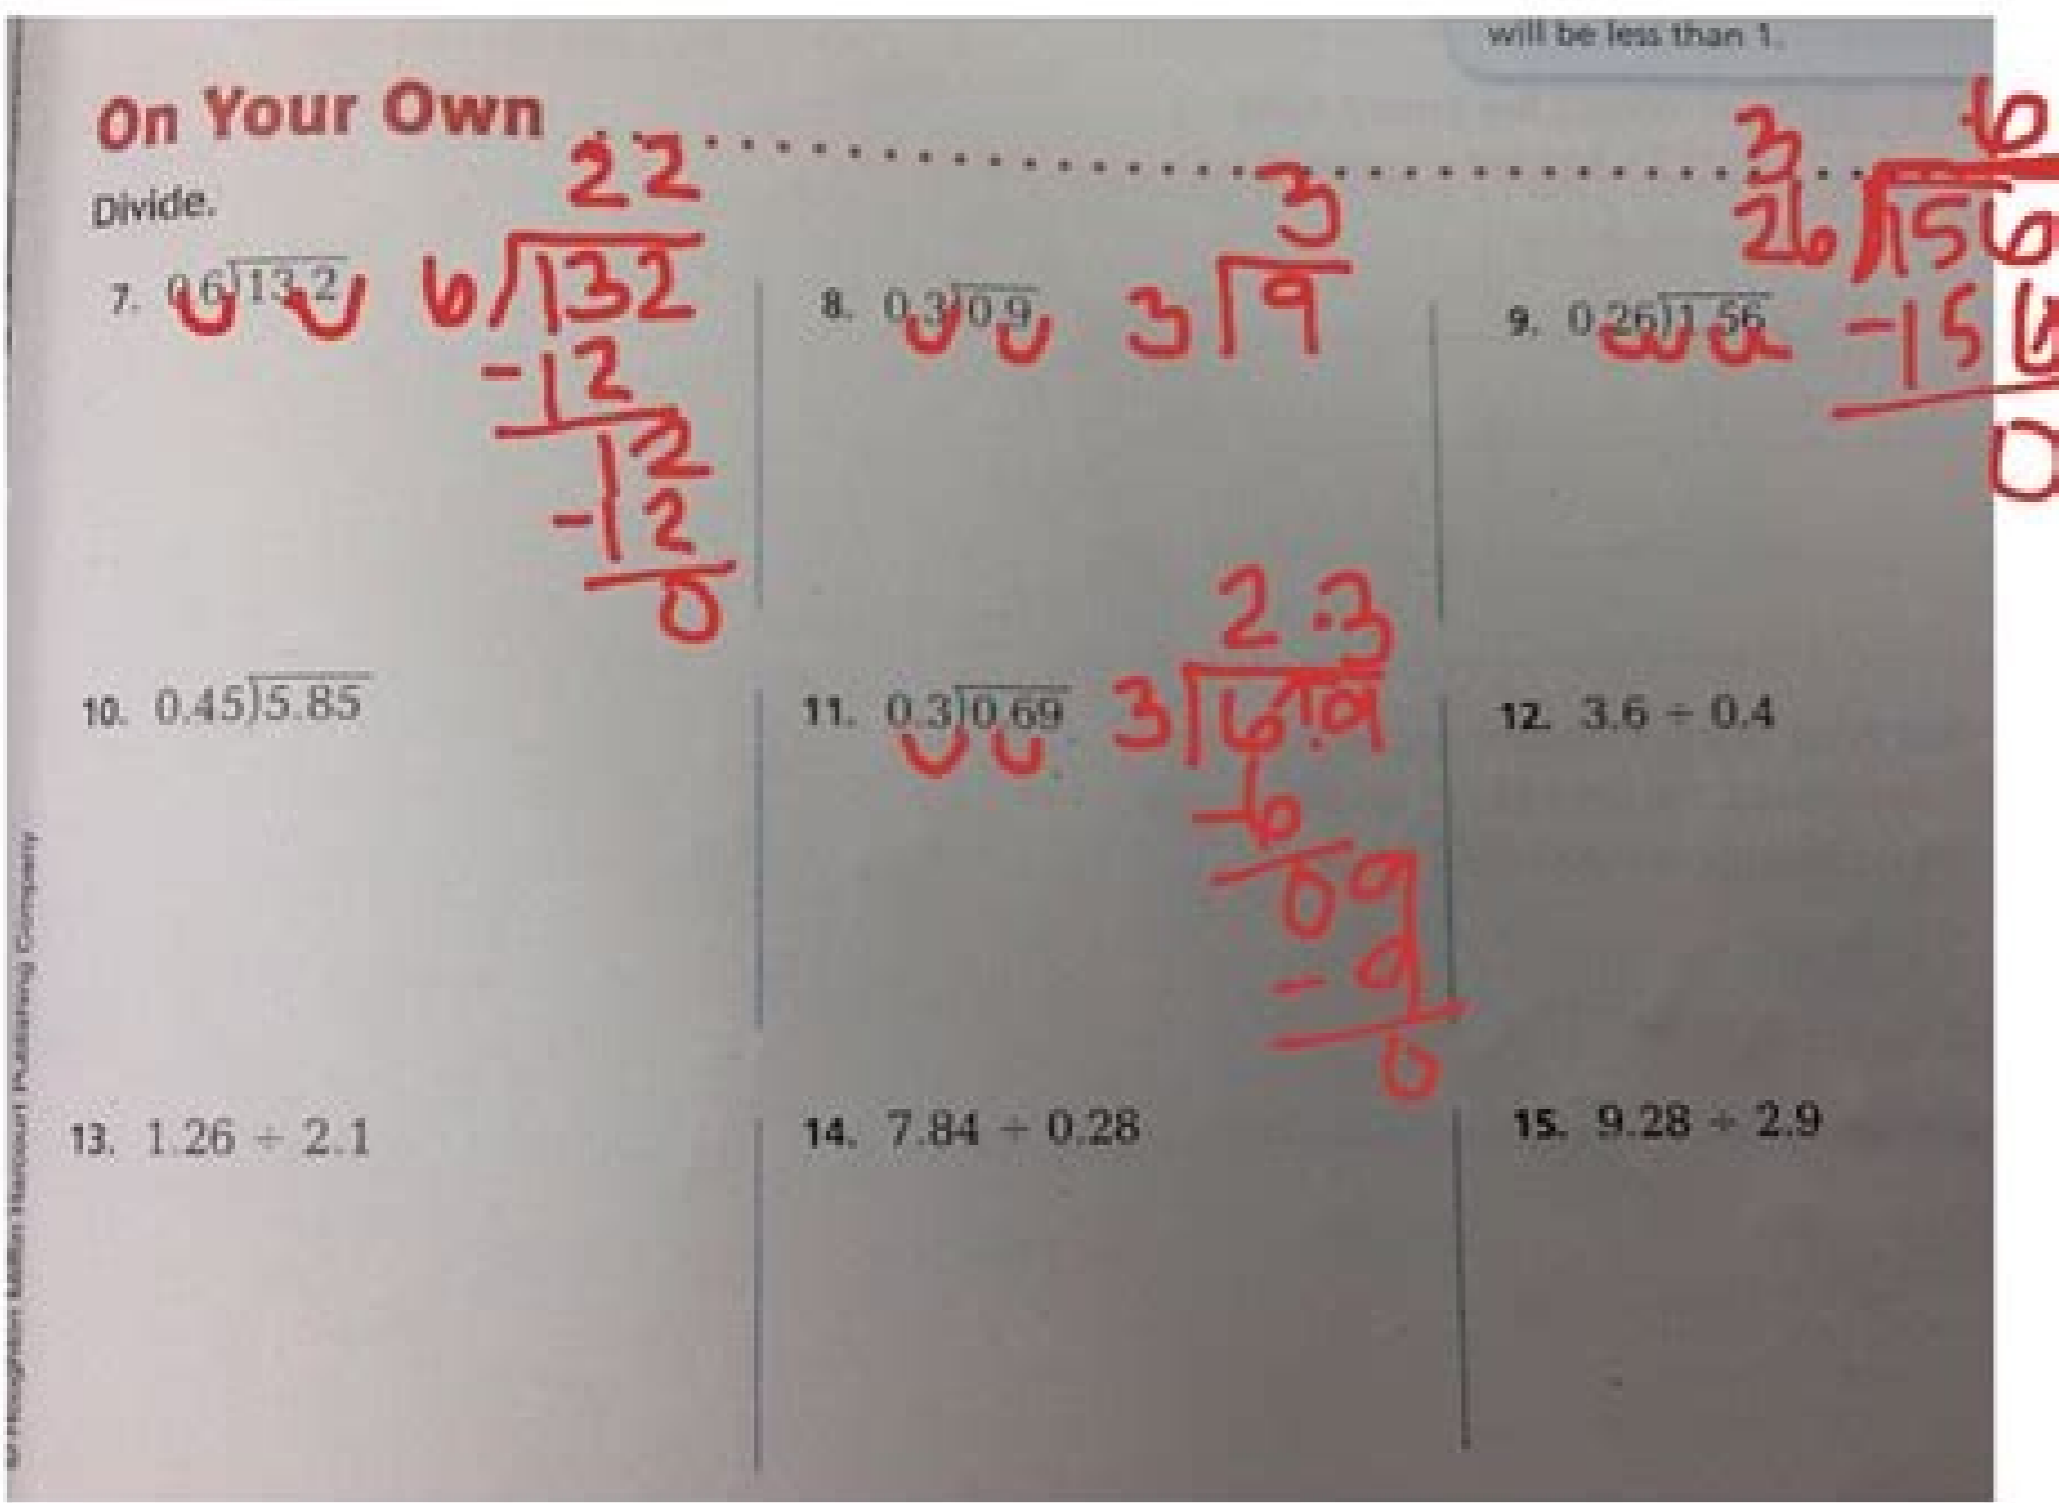

$$3 \times 200 = 600$$

Think: 165 is between 100 and 200. Use those numbers to estimate.

So, the African elephant can pick up between 300 and 600 pounds.

An African elephant is the largest living land mammal.
